

Trim-Kut® Trimmable Grinding Discs

Trim-Kut patented one-piece molded plastic grinding discs offer all the advantages of paper abrasives and cut-down grinding discs without any of the problems. There's no need to "muscle" it; the cutting power is in the edge. Trim-Kut discs can easily be trimmed down as the edge wears, producing a new, sharp cutting edge; just spin a disc on its side against a steel edge or concrete floor.

Trim-Kut discs are insulated against heat build up, allowing cooler high speed grinding. They also resist paint loading. Use them with professional sanders or die grinders. No-lock, quick-change safety mandrels and adapters eliminate backing pad and center nut hassles. Just spin and go! Abrasives are embedded in the plastic, so they can't come loose. These discs last much longer than paper abrasives, and are rated up to 28,000 RPM.
